Hypercosm™

WHAT IS HYPERCOSM?

Hypercosm is a powerful software suite used to build interactive web-based 3D content for training, courseware,manuals, websites and product visualizations. Our technology allows 3D models to be turned into effective fast-downloading, high fidelity interactive simulations.

Hypercosm's capabilities are built on a patented technique to create highly compressed 3D graphic files. The result of this approach is a 3D applet that can be viewed on the web, mobile computer, or in a PowerPoint presentation. Hypercosm applets can also be easily sent via email.
Our products include:

Hypercosm Player: A free viewer that integrates with standard web browsers (including Internet Explorer, Netscape and Firefox) to display Hypercosm 3D content.

Hypercosm Teleporter: A $299 exporting tool for Autodesk's 3ds Max™ or VIZ™ for efficient one-click creation of high-fidelity web deployable applets.

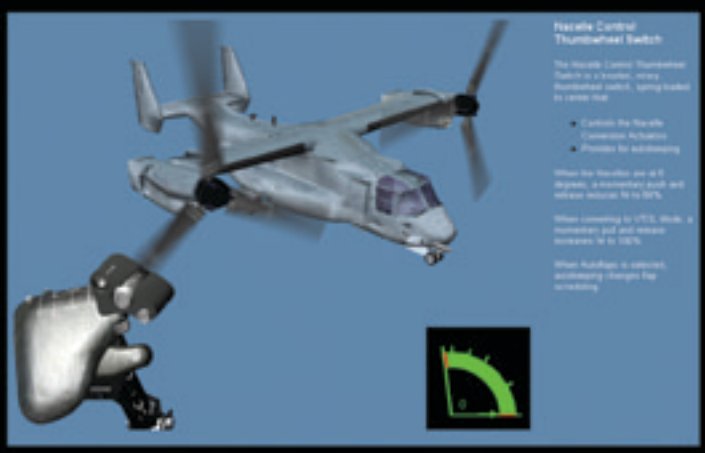

Hypercosm Studio: A text-based authoring tool that helps creators program unlimited behaviors and user interactions into exported 3D models and animations.

Hypercosm can help provide real-time 3D solutions in a variety of applications to deliver benefits of:

- Improved comprehension of complex equipment or assembly tasks
- More effective communication with customers and students
- Better graphics and animation options for websites and mobile devices
- Reduced training hardware costs
- Faster web-based content development

APPLICATIONS AT A GLANCE:

- **Classroom or mobile training systems**
- **On-line product or concept visualization**
- **Technical support websites**
- **Electronic technical manuals**
- **Interactive designs and demonstrations**
